Ecosystem/Terrain

- The forest at Jakey Hollow is a good example of a mature mix of coniferous and deciduous species.
- Dominant evergreen species include white pine and hemlock.

A small stand of virgin hemlock can be found at Jakey Hollow.

- Dominant deciduous species include northern hardwoods and oaks.
- Area contains a stand of white ash, which is treated regularly for emerald ash borer.
- Water features include Fishing Creek and an unnamed tributary that runs through the area.

Wildlife

- The natural area provides critical habitat for many species of birds, including several warbler species.

The black-throated blue warbler has been observed in the natural area.

- Jakey Hollow also hosts other interior forest birds like the scarlet tanager and indigo bunting.
- The natural area provides good cover for white-tailed deer, which can be hunted during applicable seasons.

Access

- Route 42 and U.S. 80 are major corridors that lead to the area.
- Crawford Road provides access to the area from the south.

Among several other spring ephemeral wildflower species, the painted trillium can be found at Jakey Hollow.
