## **DCNR Invasive Plant List**

DCNR defines invasive plants as those species that are not native to the state, grow aggressively, and spread and displace native vegetation. Invasive plants are generally undesirable because they are difficult and costly to control and can dominate whole habitats, making them environmentally destructive in certain situations. Not all non-native plants become invasive. In fact, very few actually do. The plants listed here have been determined by DCNR to be invasive on State Forest and State Park lands and may act aggressively in other parts of Pennsylvania. Some of the species listed below are only invasive in certain environmental conditions and there may be cases where they may be used with little environmental risk. This list was compiled through coordinated efforts between ecologists in Pennsylvania and other natural resource partners. New species cross state borders and some plants that have been here for decades may suddenly become invasive due to changing land uses, changes in weather or climate, or genetic reasons, so this list may change over time and will be updated periodically. This list is not regulatory. It is used to guide the management efforts of DCNR lands because of knowledge that these species can become invasive under the right environmental conditions. To learn more about invasive plants in Pennsylvania and how they can be controlled, visit www.dcnr.state.pa.us/forestry/plants/invasiveplants/index.htm.

Invasive plant species have been ranked in terms of the threat they pose to native plant communities. Each rank is defined below:

- **Rank 1** Severe Threat. Exotic plant species that possess characteristics of invasive species and spread easily into native plant communities and displace native vegetation. Includes species that are or could become widespread in Pennsylvania.
- **Rank 2-** Significant Threat. Exotic plant species that possess characteristics of invasive species but are not presently considered to spread as easily and aggressively into native plant communities as those species listed as Rank 1.
- **Rank 3** Lesser Threat. Exotic plant species that spread in or near disturbed areas, and are not presently considered a major threat to undisturbed native plant communities.
- **Watch List** Exotic plant species that are severe problems in surrounding states but have not been widely reported in Pennsylvania, OR may naturalize and become a problem in the future and require more monitoring.

## Vines

Scientific Name	Common Name	Rank
Ampelopsis glandulosa	Porcelain Berry	1
Celastrus orbiculatus	Oriental Bittersweet	1
Humulus japonicus	Japanese Hops	1
Lonicera japonica	Japanese Honeysuckle	1
Persicaria perfoliata	Mile-a-Minute	1
Pueraria montana var. lobata	Kudzu	1
Vincetoxicum nigrum	Black Swallow-Wort	1
Vincetoxicum rossicum	Pale Swallow-Wort	1
Euonymus fortunei	Wintercreeper	2
Wisteria floribunda	Japanese Wisteria	2
Wisteria sinensis	Chinese Wisteria	2
